

READY TO MIX

An **Easy** Add for **Big** Impact

Introducing the Bona Additive+ Range. A unique range of easy to use, powerful additives that enhance and add extra options to your preferred coatings, features that were previously limited to specific products.

Whether you want to adjust appearance, maximise open time or increase slip resistance. Now, when the job calls for special requirements, you can easily add them in no time to your favorite Bona finish or primer, without needing to order extra products that could delay your project.

With the Bona Additive+ Range, you're equipped to tackle everyday challenges with confidence.

Enhanced Flexibility with Bona Additive+ Range

- ✓ Enhance your existing coatings
- ✓ Simplify product handling
- ✓ Add design flexibility
- ✓ Tackle everyday challenges
- ✓ Ready to mix with Bona Finishes & Primers

Who is Bona?

- The market leader in timber floor finishes globally
- Bona products are available in over 90 countries
- The No1 choice for professional contractors
- Experts in floor coatings & cleaning products since 1919

*Please read the additional information regarding the Bona Additive+ Range, including technical datasheets, safety information and certificates at **bona.com.au** before using these products.*

Enhancements for Bona Primers & Finishes

Bona®

Bona **AntiSlip**

Mix Bona AntiSlip with any Bona Traffic finish to increase slip resistance, without requiring a separate AntiSlip coating.

Bona AntiSlip additive boosts the slip resistance of your chosen Bona finish, meeting or exceeding Australian building regulations in areas with risk of slips and falls, such as commercial premises, kitchens, entrances, staircases and landings.

AntiSlip properties were previously exclusive to specialised Bona Traffic HD Anti-Slip and Bona Traffic HD Raw, but with the introduction of Bona AntiSlip additive, you can now extend this functionality to a wider range of finishes, for both wood and resilient flooring, offering you greater flexibility.

- Reduces slip risk
- For wood and resilient floors
- Slip resistance according to AS 4586:2013
- Suitable for recoating treatments

Bona **Toner**

Simply mix your chosen Toner Additive with any Bona topcoat or primer to achieve the colouration required.

Toner Additive allows design flexibility and simplified product handling, helping you customise the appearance of timber floors without needing a pre-coloured finish.

The three different toner colours make it simple to adjust timber colouration and achieve your desired look. The depth and intensity of the colour can easily be controlled by adjusting the number of applications. Toners White, Amber or Black enable you to simply add the desired colour as needed. This streamlines product handling and creates adaptability for every project.

- Available in White, Amber or Black
- Change the colour of the floor or add a tone
- Directly adds to Bona primers and topcoats

Bona **Extender**

Bona Extender is an additive that maximises the open time of Bona water-based finishes and primers.

It is designed for use in less than ideal or abnormal application conditions that would normally impact drying times, such as when room temperature is higher than normal. Bona Extender enables contractors to work at a steady, comfortable pace with enhanced control. This minimises stress during application and ensures a professional result.

- Maximises open times
- Facilitates application in warm/dry climates
- For all Bona primers and topcoats
